

WHAT IS HYPOTHYROIDISM?

Hypothyroidism, also called underactive thyroid or low thyroid, is a disorder of the endocrine system in which the thyroid gland does not produce enough thyroid hormone. It can cause a number of symptoms, such as poor ability to tolerate cold, a feeling of tiredness, constipation, depression, and weight gain.

TYPES OF HYPOTHYROIDISM

There are three types of hypothyroidism: primary, secondary, and tertiary. In primary hypothyroidism, your thyroid is being stimulated properly. However, it isn't able to produce enough thyroid hormones for your body to function properly.

REASONS OF HYPOTHYROIDISM

Hypothyroidism results when the thyroid gland fails to produce enough hormones. Hypothyroidism may be due to a number of factors, including: Autoimmune disease. The most common cause of hypothyroidism is an autoimmune disorder known as Hashimoto's thyroiditis.

SYMPTOMS OF HYPOTHYROIDISM

- Fatigue.
- Increased sensitivity to cold.
- Constipation.
- Dry skin.
- Weight gain.
- Puffy face.
- Hoarseness.
- Muscle weakness.
