

## **Y& WHAT IS HAEMOLYTIC DISORDERS?**

Hemolytic disease of the newborn, also known as hemolytic disease of the fetus and newborn, HDN, HDFN, or erythroblastosis fetalis, is an alloimmune condition that develops in a peripartum fetus, when the Igg molecules (one of the five main types of antibodies) produced by the mother pass through the placenta.

### **CAUSES OF HAEMOLYTIC DISORDERS**

- Inherited conditions, such as sickle cell anemia and thalassemia.
- Stressors such as infections, drugs, snake or spider venom, or certain foods.
- Toxins from advanced liver or kidney disease.
- Inappropriate attack by the immune system (called hemolytic disease of the newborn when it occurs in the fetus of a pregnant woman)

### **SYMPTOMS OF HAEMOLYTIC DISORDERS**

- Dark urine.
- Yellowing of the skin and the whites of the eyes (jaundice)
- Heart murmur.
- Increased heart rate.
- Enlarged spleen.
- Enlarged liver.

### **NEUROTHERAPY TREATMENT**

Treatment (6) Adr

This treatment is to be repeated a few more times after every 20 minutes.
