

WHAT IS BLACK RINGS AROUND EYES?

Dark circles under the eyes are a common complaint of both men and women, although they can occasionally be seen in children. As people age, the skin becomes thinner and collagen is lost, sometimes enhancing the appearance of blood vessels beneath the eyes and making the area appear darker

CAUSES OF BLACK RINGS AROUND EYES DISORDERS

- Allergies, asthma, and eczema. Any condition that causes the eyes to itch can contribute to darker circles due to rubbing or scratching the skin around them. ...
- Medications. Any medications that cause blood vessels to dilate can cause circles under the eyes to darken. ...
- Anemia. ...
- Fatigue. ...
- Age. ...
- Periorbital hyper pigmentation.

SYMPTOMS OF BLACK RINGS AROUND EYES

Sleep deprivation can cause your skin to become dull and pale, allowing for dark tissues and blood vessels beneath your skin to show. Lack of sleep can also cause fluid to build underneath your eyes, causing them to appear puffy. As a result, the dark circles you see may actually be shadows cast by your puffy eyelids.
