

WHAT IS DIFFERENCE IN EYE SIZE?

Anisocoria is a condition in which the pupil of one eye differs in size from the pupil of the other eye. Your pupils are the black circles in the center of your eyes, and they are usually the same size. ... In some cases, your doctor might diagnose an underlying medical condition or other cause of anisocoria.

CAUSES OF DIFFERENCE IN EYE SIZE

Either the larger or the smaller pupil may be the abnormal one depending on the cause. ... If the smaller pupil is abnormal, the difference is greater in the dark. Eye disorders that cause unequal pupils include birth defects and eye injury. Also, certain drugs that get into the eye may affect the pupil.

SYMPTOMS OF DIFFERENCE IN EYE SIZE

Also, the underlying disorder sometimes causes other symptoms such as eye pain and redness, loss of vision, drooping eyelid, double vision, or headache. These more noticeable symptoms are often the reason people seek medical care rather than the unequal pupils.
