WHAT IS NOSE BLEEDING?

Overview, Nosebleeds are common. They may be scary, but they rarely indicate a serious medical problem. The nose contains many blood vessels, which are located close to the surface in the front and back of the nose. They're very fragile and bleed easily.

CAUSES OF NOSE BLEEDING DISORDERS

- Foreign object stuck in the nose.
- Chemical irritants.
- Allergic reaction.
- Injury to the nose.
- Repeated sneezing.
- Picking the nose.
- Cold air.
- Upper respiratory infection.

SYMPTOMS OF NOSE BLEEDING DISORDERS

Taking antihistamines and decongestants for allergies, colds, or sinus problems can also dry out the nasal membranes and cause nosebleeds. Frequent nose blowing is another cause of nosebleeds. Other common causes of nosebleeds include: foreign object stuck in the nose.

NEUROTHERAPY TREATMENT

First day   **(8) Th+ch (3) Thyroid**

Second day   **normal treatment formula**

Third day   **acid treatment formula**
