

WHAT IS EXCESSIVE SALIVATION IN CHILDREN?

Excessive drooling is not normal in the older, healthy child. Causes may be linked with poor mouth and tongue control. It is important to rule out any serious conditions that may be causing the drooling. Non-surgical treatment may include improving posture, orthodontics, reducing nose blockage or certain medications.

TYPE OF EXCESSIVE SALIVATION IN CHILDREN

Excessive drooling is not normal in the older, healthy child. Causes may be linked with poor mouth and tongue control. It is important to rule out any serious conditions that may be causing the drooling. Non-surgical treatment may include improving posture, orthodontics, reducing nose blockage or certain medications.

CAUSES OF EXCESSIVE SALIVA PRODUCTION, LEADING TO HYPER SALIVATION, INCLUDE:

- Morning sickness or nausea during pregnancy.
- Sinus, throat, or peritonsillar infections.
- Poisonous spider bites, reptile venom, and poisonous mushrooms.
- False teeth.
- Ulcers, inflammation, or pain in the mouth.
- Poor oral hygiene.
