

WHAT IS CONJUNCTIVITIS

Conjunctivitis is an inflammation or swelling of the conjunctiva. The conjunctiva is the thin transparent layer of tissue that lines the inner surface of the eyelid and covers the white part of the eye. Often called "pink eye," conjunctivitis is a common eye disease, especially in children.

TYPES OF CONJUNCTIVITIS

- Bacterial conjunctivitis is a common type of pink eye, caused by bacteria that infect the eye through various sources of contamination.
- Viral conjunctivitis is another common type of pink eye that is highly contagious, because airborne viruses can be spread through sneezing and coughing.

SYMPTOMS OF CONJUNCTIVITIS

- Redness in the white of the eye or inner eyelid.
- Swollen conjunctiva.
- More tears than usual.
- Thick yellow discharge that crusts over the eyelashes, especially after sleep. ...
- Green or white discharge from the eye.
- Itchy eyes.
- Burning eyes.
- Blurred vision.

CAUSES OF CONJUNCTIVITIS

A viral or bacterial infection can cause conjunctivitis. It can also develop due to an allergic reaction to air irritants such as pollen and smoke, chlorine in swimming pools, ingredients in cosmetics, or other products that contact the eyes, such as contact lenses
