

## **WHAT IS TUBERCULOSIS**

Tuberculosis (also known as "TB") is a disease caused by a type of bacteria called *Mycobacterium tuberculosis*. TB mainly infects the lungs, although it can also affect other organs. When someone with untreated TB coughs or sneezes, the air is filled with droplets containing the bacteria.

## **TYPES OF TUBERCULOSIS**

- Active TB Disease. Active TB is an illness in which the TB bacteria are rapidly multiplying and invading different organs of the body.
- Miliary TB. Miliary TB is a rare form of active disease that occurs when TB bacteria find their way into the bloodstream.
- Latent TB Infection.

## **CAUSES OF TUBERCULOSIS**

Tuberculosis (TB) is caused by a type of bacterium called *Mycobacterium tuberculosis*. It's spread when a person with active TB disease in their lungs coughs or sneezes and someone else inhales the expelled droplets, which contain TB bacteria.

## **SYMPTOMS OF TUBERCULOSIS**

- Coughing that lasts three or more weeks.
- Coughing up blood.
- Chest pain or pain with breathing or coughing.
- Unintentional weight loss.
- Fatigue.
- Fever.
- Night sweats.
- Chills.
