

WHAT IS PHARYNGITIS?

Inflammation of the pharynx, causing a sore throat.

CAUSES OF PHARYNGITIS

- Measles.
- Adenovirus, which is one of the causes of the common cold.
- Chickenpox.
- Croup, which is a childhood illness distinguished by a barking cough.
- Whooping cough.
- Group a streptococcus.

CAUSES OF PHARYNGITIS

Less commonly, pharyngitis is caused by a bacterial infection. Bacterial infections require antibiotics. The most common bacterial infection of the throat is strep throat, which is caused by group a streptococcus. Rare causes of bacterial pharyngitis include gonorrhea, chlamydia, and corynebacterium.
