

WHAT IS MEMORY LOSS (AMNESIA)

Amnesia is a deficit in memory caused by brain damage, disease, or psychological trauma. ... The memory can be either wholly or partially lost due to the extent of damage that was caused. There are two main types of amnesia: retrograde amnesia and anterograde amnesia.

CAUSES OF AMNESIA MEMORY LOSS

The loss can be temporary or permanent, but 'amnesia' usually refers to the temporary variety. Causes include head and brain injuries, certain drugs, alcohol, traumatic events, or conditions such as Alzheimer's disease.

SYMPTOMS OF AMNESIA MEMORY LOSS

- Amnesia is a general term describing memory loss.
- Symptoms include memory loss, confusion and the inability to recognize familiar faces or places.
- Some of the causes of temporary amnesia include concussion, severe illness and high fever, emotional stress, some drugs and electroconvulsive therapy.
