

WHAT IS LORDOSIS DISORDERS?

Lordosis is the normal inward lordotic curvature of the lumbar and cervical regions of the human spine. ... Lumbar hyperlordosis is excessive extension of the lumbar region, and is commonly called hollow back or saddle back (after a similar condition that affects some horses).

CAUSE OF LORDOSIS

- Achondroplasia. ...
- Spondylolisthesis. ...
- Osteoporosis, a condition in which vertebrae become fragile and can be easily broken (compression fractures)
- Obesity or being extremely overweight.
- Kyphosis. ...
- Discitis. ...
- Benign (harmless) juvenile lordosis.

SYMPTOMS OF LORDOSIS

- Appearing swayback, with the buttocks being more pronounced.
- Having a large gap between the lower back and the floor when lying on your back on a hard surface that does not change when you bend forward.
- Back pain and discomfort.
- Problems moving certain ways.

NEUROTHERAPY TREATMENT

I	(8)	Pan
	(3)	Gal
	(7)	Liv

After ½ hour

II	1,25 DCC
