

WHAT IS TILT (RIGHT SIDED) DISORDERS?

Left pelvic tilt is when the right side of the pelvis is elevated higher than the left side. Right pelvic tilt is when the left side of the pelvis is elevated higher than the right side.

CAUSES OF TILT (RIGHT SIDED)

Most cases of head tilt are associated with a condition called torticollis (described below), although in rare instances a head tilt can be due to other causes such as hearing loss, misalignment of the eyes, reflux (a flowing back of stomach acid), a throat or lymph node infection, or, very uncommonly, a brain tumor.

SYMPTOMS OF TILT (RIGHT SIDED)

- Head tilts to one side.
- Limited range of motion in the head and neck.
- Recurrent episodes of head tilting. During these episodes, your child may also experience drowsiness, irritability, or vomiting.
